Former Mizuho Bank, Ltd. and former Mizuho Corporate Bank, Ltd. merged as of July 1, 2013 with former Mizuho Corporate Bank being the surviving entity, which changed the trade name to Mizuho Bank, Ltd.

The figures for Mizuho Bank, Ltd. disclosed herein maintain the following unless indicated otherwise:

- The figures for the six months ended September 30, 2013 are calculated under the Basel III International Standard.
- The figures for the six months ended September 30, 2012 include both figures of former Mizuho Bank, Ltd. and former Mizuho Corporate Bank, Ltd. calculated under the Basel II Domestic Standard and Basel II International Standard, respectively.

Capital adequacy ratio highlights

The Basel Framework, based on the “International Convergence of Capital Measurement and Capital Standards: A Revised Framework” issued by the Basel Committee on Banking Supervision, requires the disclosure of capital adequacy information to ensure the enhanced effectiveness of market discipline. Our disclosure is made under the “Matters Separately Prescribed by the Commissioner of the Financial Services Agency Regarding Capital Adequacy Conditions, etc. pursuant to Article 19-2, Paragraph 1, Item 5, Subitem (d), etc. of the Ordinance for Enforcement of the Banking Law (Ministry of Finance Ordinance No. 10 of 1982)” (the FSA Notice No. 15 of 2007).

We have adopted (a) the advanced internal ratings-based approach as a method to calculate the amount of credit risk weighted assets and (b) the advanced measurement approach as a method to calculate the amount equivalent to the operational risk.

We calculate capital adequacy ratios based on the revised FSA Notices (“Standards for Determining the Status of Capital Adequacy for banks, in accordance with Banking Law Article 14-2” (the FSA Notice No. 19 of 2006), as amended, and “Standards for Determining the Status of Capital Adequacy for bank holding companies, in accordance with Banking Law Article 52-25” (the FSA Notice No. 20 of 2006), as amended (the “FSA Notice No. 20”)) from the fiscal year ended March 31, 2013.

The tables for the six months ended September 30, 2012 and 2013, set forth under the heading “Status of Capital Adequacy,” are calculated based on the Basel II (Figures for former Mizuho Bank are calculated under the domestic standard. Figures for Mizuho Financial Group, former Mizuho Corporate Bank and Mizuho Trust & Banking are calculated under the international standard.) and Basel III Framework, respectively.

Notes:

1. The above figures are calculated based on the International standard applied on a consolidated basis under the FSA Notice No. 20.
2. As it is not possible to break down Mizuho Financial Group's common stock and preferred stock according to classes of stock, non-cumulative perpetual preferred stock is not stated separately from capital.
3. In calculating the consolidated capital adequacy ratio, we underwent an examination following the procedures agreed with Ernst & Young ShinNihon LLC, on the basis of "Treatment in implementing examination by agreed-upon procedures for calculating capital adequacy ratio" (Industry Committee Practical Guideline No. 30 of the Japanese Institute of Certified Public Accountants). Note that this is not a part of the accounting audit performed on our consolidated financial statements. This consists of an examination under agreed-upon procedures performed by Ernst & Young ShinNihon LLC on a portion of the internal control structure concerning the calculation of the capital adequacy ratio and a report of the results to us. As such, they do not represent an opinion regarding the capital adequacy ratio itself nor the internal controls related to the calculation of the capital adequacy ratio.
4. The amount of net deferred tax assets was ¥420.4 billion and the maximum amount of deferred tax assets that can be recorded without diminishing the amount of Tier 1 capital for the purpose of calculating capital adequacy ratio was ¥1,258.1 billion.
5. The "adjusted amount for credit risk-weighted assets" is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the foundation internal ratings-based approach multiplied by the rate prescribed in the FSA Notice No. 20 over the required capital under the advanced internal ratings-based approach; and the "adjusted amount for operational risk equivalent" is the amount obtained by multiplying (i) 12.5 by (ii) the excess, if any, of the required capital under the basic indicator approach multiplied by the rate prescribed in the FSA Notice No. 20 over the required capital under the advanced measurement approach.

Notes:

1. The above figures are calculated based on International standard applied on a consolidated basis under the FSA Notice No. 20.
2. In calculating the consolidated capital adequacy ratio, we underwent an examination following the procedures agreed with Ernst & Young ShinNihon LLC, on the basis of “Treatment in implementing examination by agreed-upon procedures for calculating capital adequacy ratio” (Industry Committee Practical Guideline No. 30 of the Japanese Institute of Certified Public Accountants). Note that this is not a part of the accounting audit performed on our consolidated financial statements. This consists of an examination under agreed-upon procedures performed by Ernst & Young ShinNihon LLC on a portion of the internal control structure concerning the calculation of the capital adequacy ratio and a report of the results to us. As such, they do not represent an opinion regarding the capital adequacy ratio itself nor the internal controls related to the calculation of the capital adequacy ratio.

Notes:

1. EAD: Exposure at default.
2. PD: Probability of default.
3. LGD: Loss given default.
4. Required capital: For credit risk, the sum of (i) 8% of credit risk-weighted assets, (ii) expected losses and (iii) deductions from capital. For market risk, the market risk equivalent amount. For operational risk, the operational risk equivalent amount.
5. Total required capital (consolidated): 8% of the denominator of the capital adequacy ratio.
6. The major exposures included in each portfolio classification of internal ratings-based approach are as follows:

Corporate (except specialized lending)	Credits to corporations and sole proprietors (excluding credits to retail customers)
Corporate (specialized lending)	Credits which limit interest and principal repayment sources to cash flow derived from specific real estate, chattel, businesses, etc, including real estate non-recourse loan, ship finance and project finance, etc.
Sovereign	Credits to central governments, central banks and local governmental entities
Bank	Credits to banks and securities companies, etc.
Retail	Housing loans (residential mortgage), credit card loans (qualifying revolving retail loan) and other individual consumer loans and loans to business enterprises with total credit amount of less than ¥100 million, etc. (other retail).
Equities	Capital stock, preferred securities, perpetual subordinated debt, etc. (excluding trading assets) The transitional measure (Article 13 of supplementary provision of the FSA Notice No. 20) applies to those held from September 30, 2004 or earlier, and others are applied either the PD/LGD approach or the market-based approach.
Regarded-method exposure	Investment trusts and funds, etc.
Purchase receivables	Receivables purchased from third parties excluding securities (excluding securitizations)
Securitizations	Transactions in the form of “non-recourse” and having a “senior/subordinated structure,” etc. (excluding specialized lending).
7. With the start of the application of Basel III, we recognized credit risk-weighted assets in relation to CVA risk and central counterparty-related exposure (Article 130, Paragraph 1(c) and (d) of the FSA Notice No. 20) as of September 30, 2013.
8. EAD calculated using the standardized approach for credit risk represents the amount before the deduction of specific reserve for possible losses on loans, reserve for possible losses on loans to restructuring countries and partial direct write-offs.

■ Credit risk

(4) Credit risk exposure, etc.

We exclude regarded-method exposure and securitization exposure from the amount of credit risk exposure.

The outstanding balance is based on exposure at default.

No significant difference exists between period-end credit risk position and the average credit risk position during the twelve months ended September 30, 2012 and 2013.

- “Corporate” does not include specialized lending exposure under supervisory slotting criteria.
- Each asset class includes purchased receivables.
- The commitments that can be terminated at any time without condition or terminated automatically are not included in the amount of undrawn commitments and weighted average of credit conversion factor.
- With the start of application of Basel III, regarding equity exposure under the PD/LGD approach, we recognized the risk-weighted assets by multiplying 1,250% by the expected loss (“EL”) as of September 30, 2013.

(Reference) Obligor ratings

Obligor ratings (major category)	Definition of ratings	Classification
A1–A3	Obligors whose certainty of debt fulfillment is very high, hence their level of credit risk is excellent.	Investment grade zone
B1–B2	Obligors whose certainty of debt fulfillment poses no problems for the foreseeable future, hence their level of credit risk is sufficient.	
C1–C3	Obligors whose certainty of debt fulfillment and their level of credit risk pose no problems for the foreseeable future.	
D1–D3	Obligors whose current certainty of debt fulfillment poses no problems, however, their resistance to future changes in business environment is low.	Non-investment grade zone
E1	Obligors who require close watching going forward because there are problems with their borrowing conditions, such as reduced or suspended interest payments, problems with fulfillment such as de facto postponements of principal or interest payments, or problems with their financial positions as a result of their poor or unstable business conditions.	
E2		
F1	Obligors who are not yet bankrupt but are in financial difficulties and are deemed to be very likely to go bankrupt in the future because they are finding it difficult to make progress in implementing their management improvement plans (including obligors who are receiving ongoing support from financial institutions).	Default
G1	Obligors who have not yet gone legally or formally bankrupt but who are substantially bankrupt because they are in serious financial difficulties and are not deemed to be capable of restructuring.	
H1	Obligors who have already gone bankrupt, from both a legal and/or formal perspective.	

* Obligors who have loans in need of monitoring (restructured loans and loans past due for three months or more) out of the obligors who require close watching going forward

Note:

Actual losses are the sum of the net increase (decrease) in the amount of partial direct write-offs, specific reserve for possible losses on loans and general reserve for possible losses on loans (for claims against special attention obligors or below), etc., as well as tax-qualified direct write-offs, losses from sales of non-performing loans, losses from debt forgiveness and losses from debt-equity swaps during the relevant period. Equity exposure under the PD/LGD approach is not included in the amount of actual losses.

<Analysis>

Actual losses of ¥22.5 billion in the period from October 1, 2012 through September 30, 2013 increased by ¥9.3 billion compared with the period from October 1, 2011 through September 30, 2012. This was due mainly to an increase in losses from residential mortgage exposure offset in part by a decrease in losses from corporate exposure.

■ Securitization exposure

Certain securitization exposures were deducted from capital under Basel II as of September 30, 2012. With the start of application of Basel III, for these securitization exposures, a risk weight of 1,250% was applied for calculation of credit risk-weighted assets, and a risk weight of 100% was applied for calculation of market risk equivalent amounts, as of September 30, 2013.

Notes:

1. Items that refer to “during the six-month period” show amounts accumulated during the six months ended September 30, 2012 and 2013.
2. “Amount of underlying assets” and “Losses during the six-month period” include those related to, in addition to exposure originated by us, exposure to assets originated by other financial institutions if they are contained in the same securitization program.
3. “Default exposure” and “Losses during the six-month period” with respect to synthetic securitization transactions are based on the definition of default as set forth in the respective transactions.
4. Classification based on type of underlying assets is conducted according to the principal underlying asset type for each transaction.
5. “Credit cards” include shopping credit receivables, card loans, etc.
6. The effects of risk mitigation, in the context of calculating capital adequacy ratio, of transfers (hedges) of risk through synthetic securitization transactions are reflected in “Required capital” of “(B) Information of securitization exposure retained or purchased.”
7. Of the securitization exposure retained or purchased whose risk has been transferred (hedged) through securitization schemes, we have categorized securitization exposure as investor if the risk transfer (hedge) effects are not reflected in the calculation of capital adequacy ratio, following the definition for classification of securitization exposure set forth in the FSA Notice No. 20, etc.

Notes:

- Items that refer to “during the six-month period” show amounts accumulated during the six months ended September 30, 2012 and 2013.
- Securitization exposure that is acquired in securitization of customer’s claims other than as sponsor (in the form of asset-backed securities, trust beneficiary rights and other transferable instruments) is categorized as securitization exposure as investor.
- The amount of default exposure is the amount of the underlying assets recognized as default in the calculation of capital adequacy ratio.
- Estimated loss amount related to underlying assets is based on the amount of the underlying assets as of the relevant date and the following parameters that are used in the calculation of capital adequacy ratio:
 - parameters used in the calculation of required capital for an underlying asset when applying the supervisory formula (e.g., PD); and
 - with respect to underlying assets classified as securitization exposure, the conservative application of risk weights used in the ratings-based approach.
- Classification based on type of underlying assets is conducted according to the principal underlying asset type for each transaction. Transactions that are difficult to classify are included under “Others.”
- “Credit cards” include shopping credit receivables, card loans, etc.

■ Market risk

• Trading activities

The following table shows VaR (Value at Risk) figures of our trading activities:

	(Billions of yen)		
	For the six months ended September 30, 2012	For the fiscal year ended March 31, 2013	For the six months ended September 30, 2013
End of period	3.3	3.5	5.8
Maximum	4.3	4.6	7.0
Minimum	2.6	2.6	3.3
Average	2.8	3.4	5.4
The number of cases where assumptive losses exceeded VaR during the period	1	1	1

Notes:

1. Amount of market risk (VaR) is calculated based on the internal model.
2. The multiplication factor for the calculation of market risk equivalent is determined by the number of cases where assumptive losses exceeded VaR before 250 business days prior to the end of period.
3. Our group companies which conduct trading activities are Mizuho Bank, Mizuho Trust & Banking and Mizuho Securities, etc.

VaR method:

Linear risk:	variance co-variance model
Non-linear risk:	Monte-Carlo simulation
VaR	Simple aggregation of linear risk and non-linear risk
Quantitative standard:	1. confidence interval: one-tailed 99.0%; 2. holding period: 1 day; and 3. historical observation period of one year (265 business days)

VaR (Value at Risk)

The VaR method measures the maximum possible loss that could be incurred due to market movements within a certain time period (or holding period) and degree of probability (or confidence interval).

Back testing

The Back testing is one of the methods to evaluate the effectiveness of market risk measurements calculated using the VaR method that compares VaR and amount of losses (we compare VaR with assumptive profits and losses). The number of cases where assumptive losses exceeded VaR is the number of times in which losses exceeded VaR during the corresponding period.

The following table shows stressed VaR figures of our trading activities:

	(Billions of yen)		
	For the six months ended September 30, 2012	For the fiscal year ended March 31, 2013	For the six months ended September 30, 2013
End of period	6.2	9.2	9.9
Maximum	8.2	12.0	15.0
Minimum	4.0	5.0	8.4
Average	5.2	8.0	11.4

Stressed VaR method:

Linear risk:	variance co-variance model
Non-linear risk:	Monte-Carlo simulation
Stressed VaR	Simple aggregation of linear risk and non-linear risk
Quantitative standard:	1. confidence interval: one-tailed 99.0%; 2. holding period: 1 day; and 3. historical observation period of one year of significant financial stress (265 business days)

Stressed VaR

The stressed VaR measurement is based on a continuous 12-month period of significant financial stress.

• **Outlier criteria**

The following table shows results of calculations under the outlier framework:

	(Billions of yen)		
	Amount of loss	Broadly-defined capital	Loss ratio to capital
As of September 30, 2012	427.4	7,665.1	5.5%
As of March 31, 2013	499.1	8,344.5	5.9%
As of September 30, 2013	340.8	8,806.6	3.8%
Effect of yen interest rate	88.2	n.a.	n.a.
Effect of dollar interest rate	186.8	n.a.	n.a.
Effect of euro interest rate	43.7	n.a.	n.a.

Outlier criteria

As part of the capital adequacy requirements under Basel III, the losses arising from a banking book in hypothetical interest rate shock scenarios under certain stress conditions are calculated and compared with the sum of Tier 1 and Tier 2 capital. If the interest rate risk of the banking book leads to an economic value decline of more than 20% of the sum of Tier 1 and Tier 2 capital, we will be deemed an “outlier” and may be required to reduce the banking book risk or adopt other responses.

Interest rate shock scenario under stress conditions in outlier criteria

For the interest rate shock scenario used in connection with the calculations under the outlier framework, we generate annual rate fluctuation data for five years derived from daily raw historical interest rate data of the past six years and then apply the actual fluctuation data at a 99.0% confidence level to the shock scenario.

■ Equity exposure in banking book

(8) Status of equity exposure in banking book

(A) Amounts stated in consolidated balance sheet
